

DISPLAY DEVICE WITH ADHESION CLOSURE ELEMENT

ABSTRACT OF THE DISCLOSURE

A display device (1; 101) includes a plurality of picture elements (2; 102) for displaying still and moving images, alphanumeric characters or the like. The picture elements can be controlled, either individually or in groups, by an electronic control system. The display device (1; 101) has a first flat substrate (3; 103) with fastening elements (5; 105) which project at least in sections, from its first surface (4; 104) to detachably fix the display device (1; 101) to a carrier device (7), by the co-operation of the fastening elements (5; 105) of the first flat substrate (3; 103) with the carrier device (7).
